

Task 5

- Calculator:

Ask user for two numbers and the operation which

Will be one of (+, -, *, /, %)

Then say the result of the operation to him.

Use if, else if

- Ask user if he want to continue again or no
If yes continue again
If no close the program using for loop
- Ask user for even number check if the number is even or no
If even allow him to insert again and say the summation of even numbers he inserted if the number isn't even number say error and close the program using do while.
- allow user to enter Number n of Numbers And Print These Numbers To User (Using Array)
- Use two dimensional arrays that have 3 columns and 3 rows.

Example:
if user Enter
3 1 4
4 8 9
7 8 7
then you will print 3, 8 and 7.
(Using Array)
- allow user to enter Number n of Numbers And Print These Number To Him
then add 100 to these Numbers And Print them (using List)
- allow user to enter 5 Numbers And Sort These Number s
then print them After Sorting (Using List)
